

REIN4CED - Process Engineer

What can you expect?

Are you passionate about technology, automation and production processes? Are you looking for a varied job where you are always faced with new challenges? A job where you tackle problems, develop creative solutions and are allowed to implement improvements? Then this job is definitely for you!

What can you expect?

As a process engineer you ensure that we can achieve the intended production output, with an eye for quality and safety. You are responsible for the follow-up, maintenance and optimisation of processes and installations in production, so that you can continuously develop and test process improvements. You will have a lot of freedom to find out how we can scale up our production. As a young scale-up company, we are not tied to fixed processes, methods or procedures and we are looking forward to hearing your creative proposals that make the difference!

That means:

- You identify the most important process parameters and you ensure the reliability of the production process.
- You critically analyse the production processes, so that bottlenecks, quality and efficiency losses are mapped out.
- You develop and implement proposals to optimise processes, in order to make a high-quality technical contribution to the production processes.
- You contribute to the development of new processes and machines for larger production volumes.
- You formulate creative and innovative solutions to achieve the objectives of the series production.
- You draw up specifications for new machines, you look for possible machine suppliers, you determine which machines are purchased. You also supervise the commissioning of new production lines.

To realise all this, you work closely with the entire company: internally with the development team and the production team, but also cooperation with external suppliers ensures that no day is the same.

You will join a small, close-knit, talented industrialisation team that will immerse you step by step in the wonderful world of innovative bicycle frames.

What do we expect?

- You have a Master in industrial or engineering sciences (industrial or civil engineer) preferably in electromechanics, aerospace , automotive , manufacturing engineering, mechanical engineering, plastics techniques ...
- You have preferably several years of experience in a similar position
- Experience with the development and / or commissioning of machines in a manufacturing environment is a plus
- Experience with project management (timing, budget, supplier follow-up) is a plus.
- You can work independently and accurately, you have an entrepreneurial mindset and you have a great sense of responsibility .
- You have an analytical and critical mind.
- You are fluent in Dutch and English.
- You are open in all your communication with respect for other opinions .

What do we offer?

Starting at REIN4CED offers you the opportunity to participate in an innovative and ambitious project. You are part of a young, dynamic and driven team. Our flexible, progressive and informal working environment offers you the opportunity to take initiatives and show responsibilities. There are no fixed ideas in our company, and you will have the opportunity to help shape the culture and growth of REIN4CED.

Your enthusiasm and commitment will be rewarded with a competitive salary, plus a decent package of benefits and lots of nice extras that we like to spoil our staff with.
